MOONI WHITEPAPER

COMMUNITY TOKEN – NFT – BURNS

BINANCE
SMART CHAIN

COMMUNITY TOKEN

Mooni DeFi is the incubator based on Binance Smart chain with innovative product launches, where community gets rewarded in ecosystem tokens. Our focus is to build innovative DeFi products for BSC and support fair launches for the community. The ecosystem consists of four main offerings initially, here are the products with launch dates.

NFT

Mooni DeFi allows users to easily deposit BEP20 tokens (ANY tokens) into an NFT mint, trade and market place. $Mooni token is the governance token of the platform. NFT's (non-fungible tokens) are a special type of cryptographic token which represents something unique; non-fungible tokens are thus not mutually interchangeable. Mooni DeFi Dapp will be able to mint your own NFT and trade it, you will able to perform your art and put in marketplace. We're doing this to ensure safety for users on the platform. Users can mint their own NFTs or choose to purchase others. If you're interested in being one of the artists featured, then your will be the artist of the your own NFT and anybody at the platform are will able to buy from the marketplace.

BURNS 🔥

Burning of tokens is done in the first times. It is important to know that even burned tokens are still under control of the team. This is necessary so that the team can reward the community accordingly. Terms and burn amounts can be published to the community. MOONI is based on implementing a rewarding burn strategy for those involved. For transparency, you can view the burned tokens on our website, this also serves to determine the circulating amount.
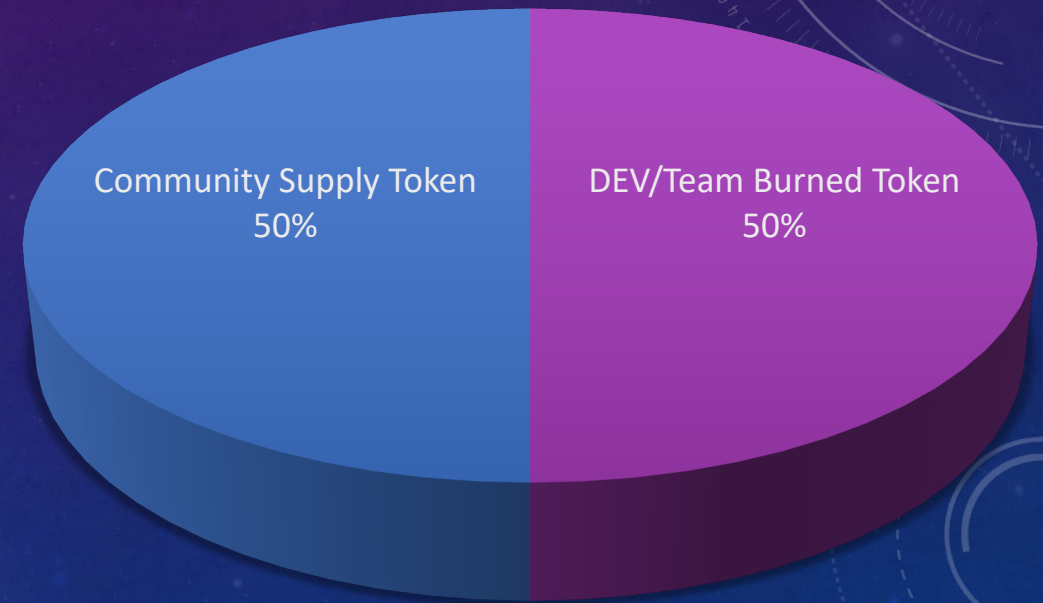

TOKENOMICS

TOTAL Supply: 1,000,000,000,000,000
Burned DEV/TEAM Token: 500,000,000,000,000
Community Supply: 500,000,000,000,000

MOONI offers following token functions:
- 4% of transactions will be yield distribution between all wallets
- 4% of trades will be put in the liquidity pool and locked

■ DEV/Team Burned Token   ■ Community Supply Token

Community Supply Token
50%

DEV/Team Burned Token
50%

SAFETY

DEV Burned all Tokens in DEV Wallet **+** Fair Launch No Presale **+** Liquidity Burned **=** 100% Unrugable

ROADMAP

Q1

- Brainstorm
- Team gathering
- Investment

Q2

- Webdesign, Twitter, Reddit, Telegram
- Create Smart Contract & deployed launching on Pancakeswap
- CG & CMC
- New Partnerships

Q3

- New Token
- Whitelist + Presale
- Launching new token
- Exchange Listing
- Starting NFT development

Q4

- Launching NFT minting and marketplace
